NetGuardian AI Backend

MONITORING

Inactive

Continuous capture status

COMPLETED CYCLES

0

Finished monitoring runs

LAST CAPTURE TIME

Apr 20, 2026, 7:58 PM

Latest saved result timestamp

Continuous monitoring is idle.

Use Start Monitoring to begin automatic background capture and analysis cycles.

Total Packets

96

Latest capture snapshot

Unique Source IPs

4

Distinct source hosts observed

Unique Destination IPs

6

Distinct destinations observed

Avg Packet Size

118.42

Average bytes per packet

Protocol Summary

TCP: 58 • UDP: 30 •
ICMP: 6 • Other: 2

Compact traffic mix

Top Ports

443 (41) • 53 (19) • 80 (13)

Most active ports in latest result

Controls

Run one-time captures or switch to continuous monitoring for automatic background cycles.

Interface

any

Packet Limit

25

Capture Duration (seconds)

10

Monitoring Interval (seconds)

30

LLM Provider

Gemini

Run One-Time Capture

Start Monitoring

Stop Monitoring

Refresh

SELECTED LLM PROVIDER

One-time captures will send **gemini** to the backend. Monitoring continues to use backend defaults.

Analyze Saved PCAP

LLM Analysis

LLM analysis unavailable: Groq connection failed.

MITRE ATT&CK Mapping

No MITRE ATT&CK mapping is available for the latest detected threat.

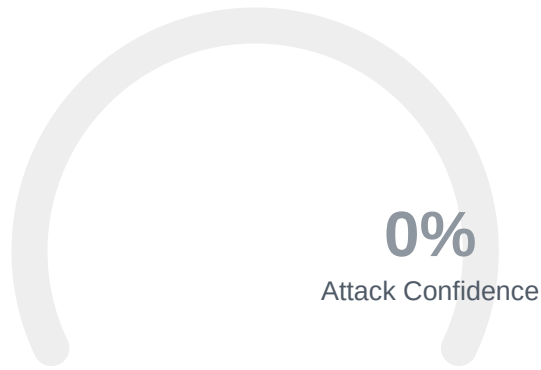

Detection Severity Comparison

Rule-based and LLM severities are normalized to the same scale for a direct visual comparison.

LLM Attack Confidence

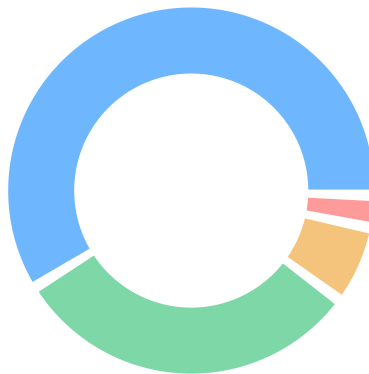

0% Confidence

Lower scores are green, mid-range scores are orange, and high attack confidence is shown in red.
